

My StorageAccount:

The screenshot shows the Azure portal interface for a storage account named 'accountjoao'. The left sidebar contains navigation links for Overview, Activity log, Tags, Diagnose and solve problems, Access Control (IAM), Data migration, Events, Storage browser, Storage Mover, Partner solutions, Resource visualizer, Data storage, Containers, Classic file shares, Queues, Tables, Security + networking, Data management, Settings, Monitoring, Automation, and Help. The main content area displays the account's properties, including its location (Spain Central), subscription (Dopco's Subscription), and disk state (Available). It also shows a list of capabilities and their status, such as Hierarchical namespace (Disabled), Blob anonymous access (Enabled), and Public network access (Enabled). A warning banner at the top indicates that the storage account is vulnerable to a security issue and should be upgraded to the minimum TLS version.

Getting the command line to mount the file shared to my Ubuntu environment:

Connect

joao-file-shared

'Secure transfer required' is enabled on the storage account. SMB clients connecting to this share must support SMB protocol version 3 or higher in order to handle the encryption requirement. Click here to learn more.

Windows Linux macOS

Mount point

joao-file-shared

To connect to this classic file share from a Linux computer, run this command:

Hide Script

```
sudo mkdir -p /media/joao-file-shared
if [ ! -d "/etc/smbcredentials" ]; then
    sudo mkdir /etc/smbcredentials
fi
if [ ! -f "/etc/smbcredentials/accountjoao.cred" ]; then
    sudo bash -c 'echo "username=accountjoao" >>
/etc/smbcredentials/accountjoao.cred'
    sudo bash -c 'echo
"password=GuYXvP+AeHVOo6LYNowoIZBPPOVKZSliaNlsOMNoTegFZxFbwZ
fpYTj8K4dqeLEW3VGxi84yfdN+Ast4ciliw==" >>
/etc/smbcredentials/accountjoao.cred'
fi
sudo chmod 600 /etc/smbcredentials/accountjoao.cred

sudo bash -c 'echo "//accountjoao.file.core.windows.net/joao-file-shared
/media/joao-file-shared cifs
nofail,credentials=/etc/smbcredentials/accountjoao.cred,dir_mode=0755,file_
mode=0755,serverino,nosharesock,mfsymlinks,actimeo=30" >> /etc/fstab'
sudo mount -t cifs //accountjoao.file.core.windows.net/joao-file-shared
/media/joao-file-shared -o
credentials=/etc/smbcredentials/accountjoao.cred,dir_mode=0755,file_mode
```

Mounting the file-shared portal to my Ubuntu environment:

```
joaoribeiro@JOCAPC:~/CIFS_Utillities$ sudo mount -t cifs \
//accountjoao.file.core.windows.net/joao-file-shared \
/mnt/azurefiles \
-o vers=3.0,username=accountjoao,password=GuYXvP+AeHV0o6LYNowo1ZBPPOVKZSIiaNls0MNoTegFZxFbwZfpYTj8K4dqeLEW3VGxi84yfDN+AST
4ciIiw==,dir_mode=0777,file_mode=0777,serverino
joaoribeiro@JOCAPC:~/CIFS_Utillities$ df -h | grep azurefiles
//accountjoao.file.core.windows.net/joao-file-shared 100T 192K 100T 1% /mnt/azurefiles
```

I’ve added a file via terminal to the file shared portal:

```
joaoribeiro@JOCAPC:~/CIFS_Utillities$ echo "Hello azure from Ubuntu" > /mnt/azurefiles/joao.txt
joaoribeiro@JOCAPC:~/CIFS_Utillities$ ls /mnt/azurefiles
LAB_Adding_Resource_Locks.pdf  joao.txt
```

File “joao.txt” on the portal:

Connect
Upload
Add directory
Refresh
Delete share
Change tier
Edit quota
Give feedback

Authentication method: Access key (Switch to Microsoft Entra user account)

Search files by prefix

Name	Type	Size
joao.txt	File	24 B
LAB_Adding_Resource_Locks.pdf	File	175.97 KiB
