Creating a new inbound rule in the Windows Defender Firewall:

Connected with my VM public ip to be connected to SSMS:

On my local machine, I got connected on my DBeaver with the VM public IP:

The screenshot displays the DBeaver application interface. On the left sidebar, the 'Connections' tree is expanded, showing a connection to 'DemoDB' with the host '68.221.161.108:1433'. The main editor window shows a SQL script with the following content:

```
-- SELECT name
-- FROM sys.databases;
-- GO

USE DemoDB;
-- GO

-- SELECT TABLE_NAME
-- FROM INFORMATION_SCHEMA.TABLES;
-- GO

-- SELECT *
-- FROM Employees;
-- GO

-- INSERT INTO Employees (FirstName, LastName, HireDate)
-- VALUES ('Alice', 'Johnson', GETDATE());
-- GO

SELECT * FROM Employees;
-- GO
```

Below the script editor, the 'Results' tab is active, displaying a table with 3 rows and 4 columns: 'EmployeeID', 'AZ FirstName', 'AZ LastName', and 'HireDate'. The data is as follows:

	EmployeeID	AZ FirstName	AZ LastName	HireDate
1	1	John	Doe	2021-01-15
2	2	Jane	Smith	2022-06-01
3	3	Alice	Johnson	2026-05-21

The status bar at the bottom indicates '3 row(s) fetched - 0.576s (0.001s fetch), on 2026-05-21 at 15:58:10'.
